**QUESTION**

Can EFT Server control processes on dissimilar platforms?

**ANSWER**

EFT Server supports a variety of inter-process communication techniques, especially with [Professional Services](#), to extend the server in a way that matches the company's business processes. Provided there is an infrastructure for interconnectivity or manipulation, this can be done. For example, you can use the Enterprise Service Bus (ESB) through Web Services, or Message Queuing, or employ older technologies such as JNRI, CORBA, DCOM, etc.
