

Internet Explorer warning on Windows 2003 (Deprecated)

(Secure FTP Server and Windows 2003 are no longer supported)

When you first install and start Secure FTP Server, you may see an Internet Explorer Warning about security. Select Add to allow Internet Explorer to recognize content

from www.globalscape.com as safe content.

The message appears because your Internet Explorer settings are set at High Security. The trial version of Secure FTP Server attempts to open a page from the Internet to update you on the status of the trial.

After you register the full version of Secure FTP Server, you can change your Internet Explorer security settings and remove globalscape.com from your list of trusted sites.

This issue occurs most often in new installations of Windows 2003 Server.
