

How can I configure the EFT outbound copy/move Event Rule action to route traffic through DMZ Gateway?

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT (All Versions)

QUESTION

Can I configure the EFT outbound copy/move Event Rule action to route traffic through DMZ Gateway?

ANSWER

DMZ Gateway is designed to handle inbound traffic only. Outbound connections that originate from EFT route through normal network mechanisms to reach the destination; however, it is possible to set up the EFT outbound copy/move action using a proxy server residing in the DMZ for outbound connections.

For details, refer to the online help for your version of EFT.
