- EFT Server (All Versions)

QUESTION

How can I configure an Event Rule to copy/move a file that is triggered on a Folder Monitor event with a Renamed condition?

ANSWER

Use the variable %FS.DST_PATH% instead of %FS.PATH%, and %FS.DST_FILE_NAME% instead of %FS.FILE_NAME%.

If the file is renamed, the new name context is lost to FS.PATH and FS.FILE_NAME, which still retain the old path/name, while the new path/name is passed to %FS.DST_PATH% and %FS.DST_FILE_NAME%.

EXAMPLE

Desired logic:

```
onitor Folder() if File Change = Renamed Then Move renamed file to xyz location
```

Suppose the monitored folder contained a file called Robert.txt and I rename the file Bob.txt:

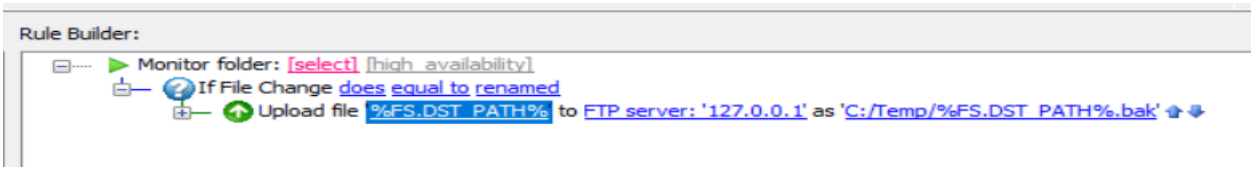

```
FS.DST_FILE_NAME%
```

contains the new value Bob.txt, while

```
FS.FILE_NAME%
```

contains the old value Robert.txt.

If you want to move the modified (renamed) file, use the "DST"-based context variables as shown below, as those contain the modified values.

How do I Configure an Event Rule to Copy/Move a File that is Triggered on a Folder Monitor Event with a Renamed Condition?
