

## Making SAT work with Active Directory

[http://help.globalscape.com/help/archive/eft6-2/mergedProjects/SAT/index.htm#Ad\\_Hoc\\_Tr](http://help.globalscape.com/help/archive/eft6-2/mergedProjects/SAT/index.htm#Ad_Hoc_Tr)

### INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT v6.0 - 6.2.x; SAT v2

### DISCUSSION

The Secure AD Hoc Transfer (SAT) module can work with Active Directory (AD) authentication.

#### To make AD work with SAT, edit the following configuration:

- Edit the AD-specific settings in the SAT module's **web.config** file. The Active Directory Server Configuration section of the online help details each of the defined settings in the **web.config** file.
- Specify an alternate form of authentication in IIS. The IIS Authentication section of the online help describes how to specify an alternate form of authentication, such as **Basic authentication** or **Integrated Windows authentication**, which must be enabled in the **Authentication Methods** dialog box. Ensure that the **Enable anonymous access** check box is not selected.
- If an alternate form of authentication is defined, the **Authenticated Users** group in IIS must be granted full permission to the **EFTAdhoc** folder (e.g., **C:\Inetpub\EFTAdHoc**).

For example, to populate the Secure Ad Hoc web page and lock the **From** field, you would edit the following variables:

```
"UseADExtensions" value="True"
```

```
AD-SetFromFieldWithEmail" value="True"
```

```
"SearchFilter"
```

```
value="(&amp;(objectClass=person)(|(sAMAccountName=%USER.LOGIN%)(userPrincipalName=%USER.L
```

```
"Attributes" value="cn,sAMAccountName,userPrincipalName,mail,displayName,sn"
```

```
"Scope" value="Subtree"
```

## Making SAT work with Active Directory

```
"UseConfiguredDomainAccount" value="Secure"
```

```
"SenderEmailDisplayAttribute" value="mail"
```

```
"LockFromField"="True"
```

(LockFromField is one of the Global variables)

Refer to [Q10464 - HOWTO: Using the SAT module with Active Directory](#) or the [SAT module help file](#) for a table of AD-specific variables.
