

Using the Server's time zone for file/folder listings in the HTTP/S engine

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT Server version 5.x - 6.2.9
- For versions 6.2.9 - 8.0.4, this setting can be changed in the Web Transfer Client interface.
- For v8.0.5, default settings were added to the **admin-configuration.json** file in the WTC. The file is located in **..\Program Files\Globalscape\EFT Server\Web\Shadowfax\wtc\assets.**) Refer to "WTC Admin-Configuration Settings" in the help for your version of EFT.

DISCUSSION

In EFT Server version 5 - 6.2.9, you can create/edit this registry key to alter the behavior of the HTTP/S engine's directory listing format. By default, files and folders are displayed using UTC; however, if this registry value is present and non-zero, we use the Server's time zone for file/folder listings in the HTTP/S engine.

On 32-bit systems:

```
[HKEY_LOCAL_MACHINE\SOFTWARE\GlobalSCAPE Inc.\EFT Server 4.0\]
```

On 64-bit systems:

```
[HKEY_LOCAL_MACHINE\Software\Wow6432Node\GlobalSCAPE Inc.\EFT Server 4.0\]
```

"UseServerTimeZone"=dword:00000001

0 = use UTC file times

any integer other than 0 = use Server time zone for file times
