

Using the Server's time zone for file/folder listings in the HTTP/S engine

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT Server version 5.x - 6.2.9
- For versions after v6.2.9, this setting can be changed in the Web Transfer Client interface. Please refer to the EFT Server help topic "Changing the Date Format" for details.

DISCUSSION

In EFT Server version 5 - 6.2.9, you can create/edit this registry key to alter the behavior of the HTTP/S engine's directory listing format. By default, files and folders are displayed using UTC; however, if this registry value is present and non-zero, we use the Server's time zone for file/folder listings in the HTTP/S engine.

On 32-bit systems:

```
[HKEY_LOCAL_MACHINE\SOFTWARE\GlobalSCAPE Inc.\EFT Server 4.0\]
```

On 64-bit systems:

```
[HKEY_LOCAL_MACHINE\Software\Wow6432Node\GlobalSCAPE Inc.\EFT Server 4.0\]
```

```
"UseServerTimeZone"=dword:00000001
```

0 = use UTC file times

any integer other than 0 = use Server time zone for file times
