

Copying a folder structure in a Monitor Folder Event Rule

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT Server version 6 and later

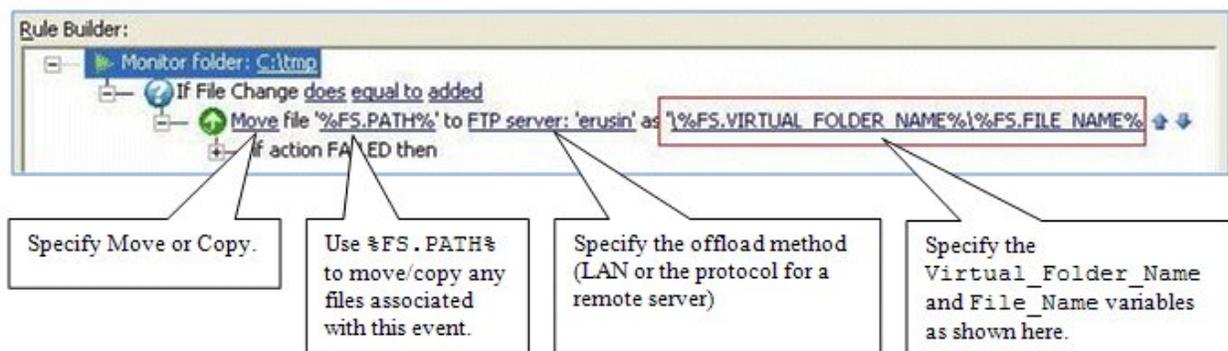

QUESTION

Can I setup a Monitor Folder Event Rule so that if a folder structure is dropped into the monitored folder, that folder structure (including all sub-folders and files) is replicated on the remote host or LAN using the same folder structure as the source?

ANSWER

If you use the variables `%FS.VIRTUAL_FOLDER_NAME%\%FS.FILE_NAME%` as the Destination Folder path, the Event Rule will copy all of the files and folders and keep the folder structure. `VIRTUAL_FOLDER` contains the structure of the folders under the monitored folder.

The Event Rule in the illustration below will copy all of the files and keep their folder structure.

NOTE: For eft 7.4.13.15 and later, Copy/Move action is now Upload/Download action.

For more information and details on these actions, please see the [online help](#) for the version of eft you are on and refer to the below references.

For details of using the Copy/Move or Protocol Upload Action in Event Rules, search for copy/move or Upload Action for the version of eft you are on from the online help link

Copying a folder structure in a Monitor Folder Event Rule

above.

For details of creating a Monitor Folder Event Rule, search for Folder Monitor for the version of eft you are on from the online help link above.
