

Mail Express Windows Authentication Configuration

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- Mail Express version 3.x

DISCUSSION

The attached document explains how to correctly configure Mail Express so that Outlook Add-in users can authenticate with the Mail Express Server using integrated Windows Authentication. The benefits of using Windows Authentication as it pertains to Mail Express include:

- The Add-in does not need to store any credentials for authenticating, which is more secure.
- Aside from ensuring that each user has a domain account, an organization does not need to create and maintain additional credentials for each Mail Express user.
- The credentials are not passed between the Add-in and the Mail Express Server, which is more secure.
