

## EFT Server requires the ODAC drivers

### **THE INFORMATION IN THIS ARTICLE APPLIES TO:**

- EFT Server and EFT Server Enterprise, v6 - v8.0.7
- EFT v8.1 and later

### **DISCUSSION**

- Version 8.1 and later: You must install the 32-bit ODAC drivers for the report writer, and the 64-bit ODAC drivers for EFT to work with Oracle. (See also KB #11568, [Oracle 64-bit ODAC drivers during EFT upgrade.](#))
- Versions prior to v8.1: Both EFT Server and EFT Server Enterprise use the 32-bit version of Microsoft ActiveX Data Objects (ADO). If you are connecting EFT Server to an Oracle database, you need to use the 32-bit ODAC (Oracle Data Access Components), even if EFT Server is installed on a 64-bit operating system.
