%FS.VIRTUAL_FOLDER_NAME% and %FS.VIRTUAL_PATH% do not reference the same values in 6.3.x as they did in previous versions

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT Server Enterprise version 6.3.x and prior

DISCUSSION

%FS.VIRTUAL_FOLDER_NAME% and %FS.VIRTUAL_PATH% do not reference the same values in 6.3.x as they did in previous versions.

If you are upgrading from a pre-6.3 version to 6.3 or later, and you have an Event Rule that triggers based on file creation, such as an "On File Upload" rule, (or a condition in the rule related to file creation), AND if that rule is using the variables %FS.VIRTUAL_FOLDER_NAME% or %FS.VIRTUAL_PATH%, you must modify the rule to accommodate for the fact that these two variables now output the full virtual path as it relates to the **Site** root instead of the **user's home folder** root. This change is to be consistent with the output from these same variables under Event Rules that trigger based on file deletion and renames.
