Add the IP address of Mail Express to Internet Explorer's "Trusted sites" zone

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- Mail Express, v3.x

DISCUSSION

Be sure to add the IP address of Mail Express to Internet Explorer's "Trusted sites" zone. When you access a local area network (LAN), an intranet share, or an intranet website, the share or website is considered to be in the "Internet Zone," which is assigned a "high security" level. By default, no websites are assigned to the Trusted Sites zone.

Refer to the Microsoft Support article [How to use security zones in Internet Explorer](#) for details of how to configure different levels of security for websites that you visit.
