Multi-part (COMB) uploads to Titan fail

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- CuteFTP, all versions

SYMPTOM

Multi-part (COMB) uploads to Titan fail.

RESOLUTION

None. Titan and CuteFTP have different implementations of the COMB command and they are not compatbile with each other. (CuteFTP can use the COMB command with EFT Server.)

MORE INFORMATION

The file is transferred in multiple parts, as it should. However, the failure occurs when attempting to reassemble the transferred file.

The log reports:

Titan FTP Server fails to execute COMB commands sent by CuteFTP because CuteFTP sends COMB commands with quoted filenames in arguments, but Titan can't handle quoted filenames.
