Message appears stating that the node is out of sync and that the service needs to be restarted

THE INFORMATION IN THIS ARTICLE APPLIES TO:

• EFT, v7.0 and later

SYMPTOM

When an admin logs into the administration interface, a message appears stating that the node is out of sync and that the service needs to be restarted.

RESOLUTION

Restart the EFT service.

MORE INFORMATION/WORKAROUND

HA nodes running on systems with more than one network interface card can get into a state in which the nodes get out of sync.

To prevent this from occurring

Bind your MSMQ listener to a specific static adapter by adding the following registry string value:

 $HKLM \ software \ Microsoft \ MSMQ \ Parameters \ Multicast BindIP$

Message appears stating that the node is out of sync and that the service needs to be restarted

with the IP address of the adapter you want to bind to.
