Timer event rules skip their scheduled execution time due to delays caused by the retry logic of ClientFTP

#### THE INFORMATION IN THIS ARTICLE APPLIES TO:

• EFT v7.2.1 and later

EFT v8.0 and later store Advanced Properties in a JSON file. When you upgrade from EFT v7.4.x to EFT v8, the non-default settings that you have defined in the registry will be added to the Advanced Properties file during upgrade. (Default settings become part of the EFT configuration files.) For a more on how to use advanced properties, and a spreadsheet of the advanced properties, please refer to the "Advanced Properties" topic in the help for your version of EFT.

#### **DISCUSSION**

The advanced property setting below will enable or disable legacy ClientFTP logic to perform transfer retries in serial mode when using the same connection settings for multiple transfers.

## In EFT v8 and later:

Add the name:value pair to the AdvancedProperties.JSON file in EFT's \ProgramData\ directory as described in the "Advanced Properties" topic in the online help for your version of EFT.

```
{
    "SerialRetriesWhenUsingSameConnectionSettings": true
}
```

# In versions prior to v8.0:

## **Enable the following registry entry:**

HKEY\_LOCAL\_MACHINE\Software\WOW6432Node\GlobalSCAPE Inc.\TED 6\Settings\Connection\

Type: DWORD

Timer event rules skip their scheduled execution time due to delays caused by the retry logic of ClientFTP

Val	lue name:	Seria	lRetriesWhe	enUsingSam	eConnectionS	Settings

Default Value: true

Cached: yes

Backup/Restore: yes
