

Do I need a multi-site license for DMZ Gateway if I want to use it with EFT SMB and Mail Express?

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT SMB v6.5 and later
- Mail Express 3.1 and later
- DMZ Gateway v3.3 and later

QUESTION

Do I need a multi-site license for DMZ Gateway if I want to use it with EFT SMB and Mail Express?

ANSWER

No, you can use 2 single-site DMZ Gateway licenses. One is activated in EFT SMB, and the other is activated in Mail Express.

MORE INFORMATION

EFT Enterprise can use multiple DMZ Gateways with a multi-site license.

Also, Mail Express can communicate to EFT Enterprise any Mail Express file transfers for use in EFT Event Rules and Reporting. Mail Express can automatically populate configuration items shared with EFT Enterprise using the **Auto sync** feature. Using **Auto sync**, Mail Express can automatically synchronize all EFT Enterprise settings that it needs or you can sync them one at a time on the various Mail Express administration pages. The Mail Express settings that can synchronize with EFT Enterprise include mail server configuration (host name and port, mail server authentication settings, and From address for Mail Express notifications) and DMZ Gateway configuration (whether DMZ Gateway is enabled in EFT, DMZ Gateway address, the server port, and the client HTTPS port).
