EFT SAML SSO with Salesforce as IDP

THE INFORMATION IN THIS ARTICLE APPLIES TO:

• EFT v7.3.3 and later

NOTE: This article provides guidelines for using a third-party tool with EFT. This article is not meant as formal support for that tool, but only as an example of setup options. Contact the third-party seller's support for detailed information about their product. Globalscape is not responsible for any configuration errors involving the third-party tool.

DISCUSSION

Overview

• This document describes how to setup and test the EFT SSO feature with Salesforce as the IDP.

Get a salesforce developer account

• Signup for a salesforce developer account at: <u>https://developer.salesforce.com/en/</u>

Get a salesforce Domain and enable for IDP

- Salesforce does a good job documenting the process for becoming a IDP. Just follow their instructions:
 - o <u>https://help.salesforce.com/HTViewHelpDoc?id=identity_provider_enable.htm&language=en_US</u>
- When you get to the step where you create your domain be sure to bookmark it. For example Safeforce will create a domain for access to your IDP app such as:

https://mypc-dev-ed.my.salesforce.com/setup/forcecomHomepage.apexp?setupid=ForceCom

• Once you've completed the setup your IDP and SSO Settings should look similar to the following:

Quick Find / Search Q Q Expand All Colleges All Lightning Experience Salestores Quick Start	Identity Providence com se dennée de las force com se define de las providers ser different service providers	der Robertite provider so you san des sindle sid de providers whose applications support sing without having to log in again. Configure EFT as a SP to the Salesforce IDP

- Once you've enabled and configured Salesforce as an IDP you'll need to define EFT As a Service Provider to the IDP. Follow Salesforce's instructions on adding an SP:
- <u>https://help.salesforce.com/HTViewHelpDoc?id=service_provider_define.htm&language=en_US</u>
- Once you've completed setup your SP settings should look similar to the following:

Create Users

Manu Datus Audit Teal

- Create some users in your Salesforce app, similarly create these same users in EFT.
- When creating your users be sure to set the User License to **Salesforce**. If you don't then you won't be able to add the user to the SSO permissions group.

	All Users Control sense van can create, vlaw, and manage users. <u>Despension</u> <u>All Users</u> - Control Create Park and and the sense and a set and a sense where a set of the set			 a y color recoloritor

and an and the set of	in the second states second states and second secon			 The second secon
Planta Control Control		\$1221222		 Etagener
Provide Crocope				 Elapsine"

Create and add users to the SSO Permissions group

- In Salesforce go to Manage Users > Permission Sets
- Create your permission set then click on Manage Assignments and add your users for SSO.

Location in a Attribute nar	me: ONAmeID
username	nat:
Identifer for	
Identifer for	~
Identifer for Unspecified Parse the us	ername using the regular expresssion:

Some tips

- We do not support user provisioning so do not enable this feature when configuring your Salesforce IDP
- We only support HTTP POST so when configuring your SP and IDP be sure to specify and use the POST endpoint.
- Make sure your IDP matching attribute matches the attribute search you specify in EFT.
