

Specify the SAML signature algorithm

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT v7.3.3 - 7.4.13.15
- EFT v8.0 adds advanced properties to an AdvancedProperties.json file instead of the registry. Refer to the EFT v8 help for information about editing the **AdvancedProperties.json** file.

DISCUSSION

SAMLSSOSignatureAlgo is used to specify the SAML signature algorithm to use. The SAML signature algorithm is an SML security signature algorithm URI or suitable abbreviation (e.g., rsa-sha256). Refer to RFC 4051, <http://www.ietf.org/rfc/rfc4051.txt>, for more information about XML Security Uniform Resource Identifiers (URIs).

In v8.0 and later:

Add the name:value pair to the AdvancedProperties.JSON file as described in the "Advanced Properties" topic in [the online help](#) for your version of EFT.

```
{
```

```
"SAMLSSOSignatureAlgo": "Specify the SAML Signature Algorithm to use"
```

```
}
```

In versions *prior* to v8.0:

32-bit:

```
HKEY_LOCAL_MACHINE\Software\Software\Globalscape Inc.\EFT Server 7.3\
```

64-bit:

```
HKEY_LOCAL_MACHINE\Software\WOW6432Node\GlobalSCAPE Inc.\EFT Server 7.3\
```

Type: STRING

Specify the SAML signature algorithm

Value name: SAMLSSOSignatureAlgo

Default Value: rsa-sha256

Maximum Length: 255

Cached: yes

Backup/Restore: Yes

Restart required: Yes
