Where do I enable Multicast Filtering (IGMP) in my vSwitch environment?

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT, version 7 and later

QUESTION

Where do I enable Multicast Filtering (IGMP) in my vSwitch environment?

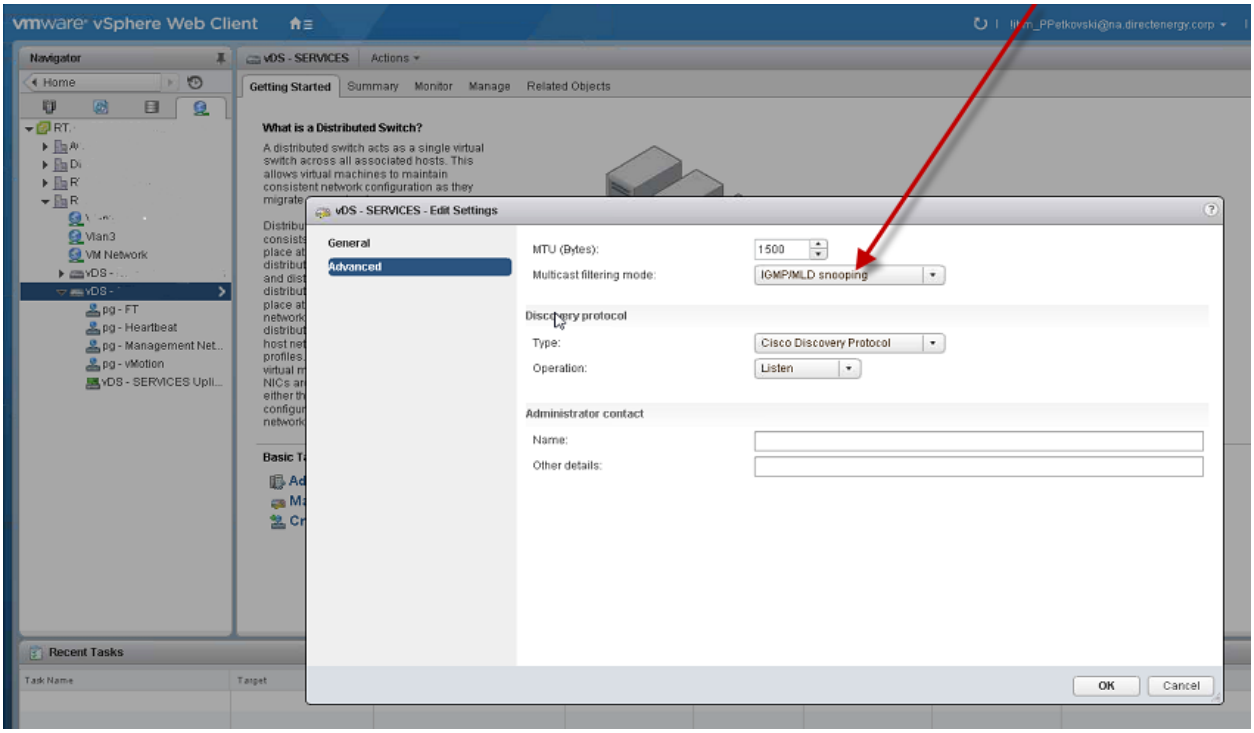

ANSWER

This setting is configured in the vShpere (thin)Client on the Desktop.

In the vSphere thin client, right-click the VLan on which you want to enable Multicast.

Click the **Advanced** option, and then change the **Multicast filtering mode** to IGMPsnooping.

Click **OK** to save your settings. You now have Multicast/IGMP enabled on your vSwitch VLan.

Where do I enable Multicast Filtering (IGMP) in my vSwitch environment?
