

Are the Globalscape EFT platform and CuteFTP client software in adherence with the Office of the National Coordinator for Health IT (ONC) standards?

**THE INFORMATION IN THIS ARTICLE APPLIES TO:**

- EFT™, v7.1 and later
- CuteFTP®, v9 and later

**QUESTION**

Are the Globalscape EFT platform and CuteFTP client software in adherence with the Office of the National Coordinator for Health IT (ONC) standards?

**ANSWER**

HIPAA is governed by NIST 800-52. NIST 800-52 requires TLS v1.0 and later. In that regard, we are compliant in both EFT and CuteFTP.

- EFT v7.1 and later support TLSv1, v1.1, and v1.2, as well as a variety of encryption ciphers.
- CuteFTP is a very secure program and supports up to TLS 1.0. Currently, CuteFTP does not support TLS v1.2, but will in a future update to the software.

The following CIPHERS must be supported for HIPAA compliance:

TLS\_RSA\_WITH\_3DES\_EDE\_CBC\_SHA

TLS\_RSA\_WITH\_AES\_128\_CBC\_SHA

**MORE INFORMATION**

Refer to <http://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.800-52r1.pdf> for NIST 800-52 guidelines regarding SSL and TLS implementations.
