

## Specifying a Temporary Folder for AS2 Transfers

### **THE INFORMATION IN THIS ARTICLE APPLIES TO:**

- EFT v7 and later

### **DISCUSSION**

If you don't want to use the EFT installation folder for temporary files or you want better visibility into your AS2 transfers, you can add the registry setting below to specify a location for files with AS2 POST requests for both the sending and receiving sides.

```
HKEY_LOCAL_MACHINE\Software\Wow6432Node\GlobalSCAPE Inc.\EFT Server 4.0\Config  
"AS2TempFolderPath" = path
```

If the path does not already exist, it will be created.

Type: **STRING**

Default Value: none

Cached: yes

Backup/Restore: no
