Override the OCSP responder URI specified in the certificate's AIA extension

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT v7.3.6 and later

DISCUSSION

Override the OCSP responder URI specified in the certificate's AIA extension. When this setting is not used, EFT is using a URL defined in a very specific part of the certificate (AIA extension). In the off chance that you need to go to a different URL than what is defined, for example if your OCSP responder changed their infrastructure and you need to point to a different URL, you would set it there.

In v8.0 and later:

Add the name:value pair to the AdvancedProperties.JSON file as described in the "Advanced Properties" topic in the online help for your version of EFT.

```
{

"OCSPStaplingForceURL": "Specify URL"

}
```

In versions *prior* to v8.0:

HKEY_LOCAL_MACHINE\Software\Wow6432Node\GlobalSCAPE Inc.\EFT Server 7.3\

Name: OCSPStaplingForceURL

Type: STRING

Default Value: none

Max Length: 4096

Cached: yes

Override the OCSP responder URI specified in the certificate's AIA extension

Backup/Restore: yes
