

# Prevent the password confirmation email from being sent when a user is not authorized to reset the password

## THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT v7.3.7 and later

EFT v8.0 and later store Advanced Properties in a JSON file. When you upgrade from EFT v7.4.x to EFT v8, the non-default settings that you have defined in the registry will be added to the Advanced Properties file during upgrade. (Default settings become part of the EFT configuration files.) For a more on how to use advanced properties, and a spreadsheet of the advanced properties, please refer to the "Advanced Properties" topic in the help for your version of EFT.

## DISCUSSION

In EFT 7.3.7, we added an advanced property to prevent the password confirmation email from being sent when a user is not authorized to reset the password, as shown below.

### In EFT v8 and later:

Add the name:value pair to the AdvancedProperties.JSON file in EFT's \ProgramData\ directory as described in the "Advanced Properties" topic in the online help for your version of EFT.

```
{  
"PreventPasswordResetUnauthorizedEmail": value  
}
```

### In versions prior to v8.0:

HKEY\_LOCAL\_MACHINE\SOFTWARE\Wow6432Node\GlobalSCAPE Inc.\EFT Server 7.3

**Type:** DWORD

**Key:** PreventPasswordResetUnauthorizedEmail

**Values:**

## Prevent the password confirmation email from being sent when a user is not authorized to reset the password

- 0- Default (current) behavior. When the workspace invitation is sent by a user, the recipient receives it from SMTP server, but when a user sends an email using EFT-Send, the recipient receives the mail from the sender's email address
- 1-Recipient receives the mail/workspace invite from SMTP server
- 2-Recipient receives the mail/workspace invite from the sender's email address
