Change DPIA report output from XML to JSON

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT v8 and later

DISCUSSION

The Data Protection Impact Assessment (DPIA) report in EFT is output as an XML file. You can output it as a JSON file using the advanced property below.

For more information about the DPIA report, refer to GDPR-DPIA Report in the EFT v8 help file.

To output the DPIA report in JSON

Add the name:value pair to the AdvancedProperties.JSON file:

```
{
"RenderDPIAReportAsJSON": 1
}
```

If set to 1 = output as JSON

If set to 0 or doesn't exist(default) = output as XML

For more information about the Advanced Properties, refer to the online help for your version of EFT.
