For direct downloads, redirect to obtain CSRF token, if none is present

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT v7.4.11 and later

EFT v8.0 and later store Advanced Properties in a JSON file. When you upgrade from EFT v7.4.x to EFT v8, the non-default settings that you have defined in the registry will be added to the Advanced Properties file during upgrade. (Default settings become part of the EFT configuration files.) For a more on how to use advanced properties, and a spreadsheet of the advanced properties, please refer to the "Advanced Properties" topic in the help for your version of EFT.

DISCUSSION

For direct downloads, redirect to obtain CSRF token if none is present. Default is false.

In v8 and later, add the name:value pair to the AdvancedProperties.JSON file:

```
{
"DirectDownloadRedirectIfNoCSRFToken": true
}
```

- If set to true = redirect to obtain CSRF token
- If set to false or doesn't exist(default) = don't redirect

In 7.4.11 1 7.4.13,

Create registry DWORD in HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\GlobalSCAPE Inc.\EFT Server 7.4\.

- If set to 1 = redirect to obtain CSRF token
- If set to 0 or doesn't exist(default) = don't redirect

Refer to the online help for your version of EFT for information about the AdvancedProperties.json file.
