

For direct downloads, redirect to obtain CSRF token, if none is present

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT v7.4.11 and later

DISCUSSION

For direct downloads, redirect to obtain CSRF token if none is present. Default is false.

In 7.4.11 1 7.4.13, create registry DWORD in
HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\GlobalSCAPE Inc.\EFT Server 7.4\.

In v8 and later, add the name:value pair to the AdvancedProperties.JSON file:

```
{  
"DirectDownloadRedirectIfNoCSRFToken": "1"  
}
```

If set to 1 = redirect to obtain CSRF token

If set to 0 or doesn't exist(default) = don't redirect

Refer to [the online help](#) for your version of EFT for information about the AdvancedProperties.json file.
