WTC fails to redirect user to “Shared with Me” workspaces

THE INFORMATION IN THIS ARTICLE APPLIES TO:

- EFT, v7.x and later

SYMPTOM

Using SSO and JIT, WTC fails to redirect user to “Shared with Me” workspaces

CAUSE

This is relate to a Chromium bug: Cookies are ignored on 302 redirects (https://bugs.chromium.org/p/chromium/issues/detail?id=696204), causing "saved path" cookie to be unavailable at the time of request to the IdP. As a result, the relay state gets incorrect path value.

(When using desktop outlook app or copy link from email and use link in new session, there is no such problem.)

RESOLUTION/WORKAROUND

Set the advanced property HttpCookieSameSitePolicy to "Lax".

To set the HttpCookieSameSitePolicy

Add the name:value pair to the AdvancedProperties.JSON file:

```
{

"HttpCookieSameSitePolicy":"Lax"

}
```

WTC fails to redirect user to “Shared with Me” workspaces
